Patent Claims

5

- 1. A magazine for firearm comprising:
 - (a) a housing having a front wall, a back wall, side walls connecting said front wall to said back wall, and a base attached to said housing;
 - (b) a spring mounted inside said housing and adapted to receive a plurality of cartridges and being biased against said cartridges, said spring being of a generally spiral, said spring includes a plurality of spirals and wherein said plurality of spirals generally fit inside each other when being pressed against said cartridges; and
 - (c) a loader mounted inside said housing and operatively connected to said spring for enabling carrying of said cartridge and operatively positioning said cartridge.
- The magazine as set forth in Claim 1 wherein said spring terminates with a bent section adapted to be received in a recess in said base.
 - 3. The magazine as set forth in Claim 1 wherein said bent section is a U-shaped like section.
- 20 4. The magazine as set forth in Claim 1 wherein said plurality of spirals having various lengths.
 - 5. A magazine for firearm comprising:

- (a) a housing having a front wall, a back wall, side walls connecting said front wall to said back wall, and a base attached to said housing;
- (b) a spring mounted inside said housing and adapted to receive bullets and being biased against said bullets, said spring being adapted to be received in a recess in said base; and
- (c) a loader mounted inside said housing and operatively connected to said spring for enabling carrying of said cartridge and operatively positioning said cartridge.
- 6. The magazine as set forth in Claim 5 wherein said spring terminates with a bent section adapted to be received in said base.
- 7. The magazine as set forth in Claim 6 wherein said bent section is a U-shaped like section.
- 8. The magazine as set forth in Claim 5 wherein said spring includes a plurality of spirals and wherein said plurality of spirals generally fit inside each other when being pressed against said cartridge.
 - 9. The magazine as set forth in Claim 8 wherein said spring includes a first spiral section, a second spiral section and a third spiral section that terminates with downward bent section, and wherein said third spiral section is longer than said first and second sections.
 - 10. The magazine as set forth in Claim 9 wherein said third spiral section generally rests on said base.
 - 11. A magazine for firearm comprising:

5

10

- (a) a housing having a front wall, a back wall, side walls connecting said front wall to said back wall, and a base attached to said housing, and wherein said housing being adapted to receive a spring in a recess in said base, said spring being adapted to receive a cartridge and being biased against said cartridge; and
- (b) a loader mounted inside said housing and adapted to be operatively connected to said spring for enabling carrying of said cartridge and operatively positioning said cartridge.
- 10 12. The magazine as set forth in Claim 11 wherein said spring terminates with a bent section adapted to be received in said base.
 - 13. The magazine as set forth in Claim 12 wherein said bent section is a U- shaped like section.
- 14. The magazine as set forth in Claim 11 wherein said spring includes a plurality of spirals and wherein said plurality of spirals generally fit inside each other when being pressed against said cartridge.
 - 15. The magazine as set forth in Claim 11 wherein said spring includes a plurality of spirals and wherein said plurality of spirals generally fit inside each other when being pressed against said cartridge.
 - 16. A magazine for firearm comprising:

5

- (a) a housing having a front wall, a back wall, side walls connecting said front wall to said back wall, and a base attached to said housing;
- (b) a spring mounted inside said housing and adapted to receive a plurality of cartridges and being biased against said cartridges, said spring being of a generally spiral, said spring includes a plurality of spirals and wherein said spring has a first extended position and a second retracted position, wherein said spring has a height in said second retracted position less than the sum of the thickness of said plurality of spirals; and

5

- (c) a loader mounted inside said housing and operatively connected to said spring for enabling carrying of said cartridge and operatively positioning said cartridge.
- 17. The magazine as set forth in Claim 16 wherein said spring terminates with a bent section adapted to be received in a recess in said base.
